

quant-engine docs

A high-performance C++ quant backtest + research engine and a terminal-style native dashboard.
This site is the user-facing reference; C++ API docs are generated separately by Doxygen.

Where to start

- **New here?** Walk through [Your first factor — a 10-minute tour](#). Zero terminal, just the dashboard.
- **First time launching the dashboard?** [Dashboard walkthrough](#) covers the screens, the keymap, and the cold-start tour.
- **Going live?** Read the [safety model](#) first, then [IBKR connectivity](#) and the [paper-trading verification](#) before flipping `broker = "ibkr-live"`.

I want to...

Task	Page
Write a backtest / sweep / walk-forward	<code>.qe</code> language
Write the per-bar signal expression	Signal DSL grammar
Validate a strategy IS / OOS	Walk-forward validation
Combine several signals into a book	Multi-strategy portfolios
Forecast returns with rolling ridge	Forecasting
Screen factors over a cross-section	Factor research
Price options + see Greeks	Options pricing
Connect to Interactive Brokers	IBKR connectivity

Task	Page
Verify a paper account end-to-end	Paper-trading verification
Understand the safety net	Safety model
Decode a TWS socket frame	TWS wire protocol

Internal testing access

Source for the engine and dashboard is currently private. For internal-testing access, contact jiucheng.zang@proton.me.
